

2 ST SAVIOUR'S CAR PARK SAFETY TRIP RAIL (AN1-2014)

As part of the improvements to the site of the former St Saviour's School which is being developed as sports pitches, it is proposed to erect a trip rail with associated boom arms around the car park. There have been a number of recent problems with vehicles driving across and parking on the grassed areas. This had led to significant damage to the grass and in extreme cases vehicles becoming stuck.

It is recommended that the proposed improvements are approved and that the Director of Environment be instructed to undertake these works.

The Director of Corporate Services advises that the above works amounting to £12,943 can be met from allowances within the Environment Department's Capital Budget 2013/14.
