

2 CAR PARKING VARIABLE MESSAGE SIGN SYSTEM (AN216-2014)

The Council has a Car Parking Variable Message Sign system (VMS) that informs car drivers of vacant spaces within car parks around the city centre and this helps the efficiency of the road network, by guiding vehicles to where there is available capacity. This system was installed and is maintained by a company called SWARCO and their maintenance contract requires to be renewed to ensure that this system is fully operational. This agenda note is to seek approval to extend this maintenance contract at a cost of £17,700.55 for one year.
