

4 INVESTIGATORY WORKS AT CITY SQUARE (AN318-2005)

The Director of Economic Development requested that the City Engineer undertake a review of the existing condition of the City Square and recommend a future course of action to improve/upgrade the structure.

In order to complete the review it will be necessary to undertake some trial works in relation to water penetration and steelwork protection.

Authority is sought to appoint specialist contractors to undertake these trial works at a probably cost of £31,500 inclusive of fees. Once these trial works are complete a comprehensive report will be brought back to Committee with recommendations on future actions together with budget costs.
