

2 ELECTRIC VEHICLE CHARGING INFRASTRUCTURE (AN52-2013)

This agenda note seeks approval for the further spending on electrical charging infrastructure within Dundee.

Reference is made to Report No 406-212 to the Environment Committee of 29th October, 2012 when the 2nd phase of charging infrastructure was approved for both council and public use.

Following increased use of the Council's electric vehicles it is recognised that to improve vehicle utilisation and to combat charging issues, further infrastructure would be beneficial, to support the Council's 39 electric vehicles. To include:-

- 2 x AC/DC Rapid Chargers
- 1 x Mobile Charging Unit

The cost of the additional infrastructure is £70,000 and the Director of Corporate Services advises that this will be funded from an additional Transport Scotland "Plugged in Places" grant. It is recommended that the committee agree the proposed additional spend and instruct the Director of Environment to undertake these works.
