

5 CAIRD PARK VELODROME UPGRADING OF FACILITY (AN19-2012)

The Director of Environment has identified that the current cycling facility within Caird Park requires upgrading. The project aims to augment the current sporting facilities within Caird Park by providing upgraded surfacing, lighting and drainage for the Velodrome. The works include the resurfacing and upgrading of the cycle track, provision of drainage facilities and the upgrading and provision of lighting.

It is recommended that the City Engineer be instructed to include this work within the existing Partnership Agreement with Tayside Contracts for delivering the Roads Maintenance and Minor Road Works Service.

Approval is therefore sought to extend the Partnership Agreement with Tayside Contracts for the work up to a value of £305,000 inclusive of professional fees and contingences.

The Director of Finance advises that the expenditure can be met from the Environment Department Capital Plan for 2011/12 and a Sports Scotland grant of £90,650.
