

REPORT TO: PERFORMANCE & AUDIT COMMITTEE – 27 SEPTEMBER 2023
REPORT ON: MENTAL HEALTH SERVICES INDICATORS – 2023/24 QUARTER 1
REPORT BY: CHIEF FINANCE OFFICER
REPORT NO: PAC25-2023

1.0 PURPOSE OF REPORT

1.1 The purpose of this paper is to report a suite of measurement relating to the activity of mental health services for scrutiny and assurance.

2.0 RECOMMENDATIONS

It is recommended that the Performance & Audit Committee (PAC):

- 2.1 Note the content of this report, including current performance against the suite of mental health service indicators (section 6 and appendix 1).
- 2.2 Comment on any further areas for development in the content and presentation of this report.
- 2.3 Note the operational and strategic supporting narrative in the context of the trends in performance and activity (section 7).

3.0 FINANCIAL IMPLICATIONS

3.1 None.

4.0 BACKGROUND INFORMATION

- 4.1 The suite of mental health measures (Appendix 1) for Dundee is intended to provide assurance and allow for scrutiny of mental health services delegated to Dundee Integration Joint Board. The suite of indicators is dynamic and can be revised and enhanced based on feedback from PAC members and other stakeholders.
- 4.2 In all data reports with public accessibility, content and disaggregation has been reviewed in order to comply with General Data Protection Regulation and ultimately to ensure that individuals cannot be identified.

5.0 LOCAL CONTEXT

5.1 Dundee has the 5th highest rate in Scotland of adults (aged 16-64) who reported in the 2011 Census that they lived with a mental health condition. Dundee has a rate of 64 people per 1,000 population compared to 54 for Scotland. Dundee also has 6319 people in the 16-64 age group who identified themselves as having mental health conditions; this is 6.4% of the 16 to 64 population. The gender balance for mental health conditions is similar to the Scottish average. There is a higher prevalence of females (57% females : 43% males) and also a higher prevalence in the 35-64 age group.

- 5.2 There is a higher rate of people with mental health conditions living in Lochee, East End and Coldside than in other Local Community Planning Partnership areas (LCPPs). East End has more than double the rate of people with a mental health condition, compared with The Ferry.
- 5.3 In the 2011 Census 31% of people with mental health conditions in Dundee rated their health as bad or very bad. There is variation between LCPP areas in terms of self-reported mental health conditions, ranging from 35% in the East End to 25% in the West End, of people who rated their health as bad or very bad.
- 5.4 In Dundee life expectancy is ten years lower for people with a mental health condition (66.8 years) compared with the general Dundee population (76.8 years).
- 5.5 It is estimated from Scottish Health Survey data that around a third (33%) of all adults age 16+ in Dundee have a limiting long-term physical or mental health condition. Results from the Scottish Burden of Disease study suggest that the population of Dundee experiences a higher rate of burden of disease (a combined effect of early deaths, and years impacted by living with a health condition) compared with Scotland, for a number of health conditions, including cardiovascular disease, COPD, Mental Health and Substance Use disorders, and diabetes.
- 5.6 The effects of COVID-19 on the population has further widened the social and health inequalities gap and many people are finding it more difficult than ever to cope across many aspects of their life. Engage Dundee found that the most common difficulties reported by respondents during the pandemic were regarding mental health (37%).
- 5.7 The Kings Fund review of long-term conditions and mental health reported that those with long-term conditions and co-morbid mental health problems disproportionately lived in deprived areas with access to fewer resources.
- 5.8 Dundee on average has around 70 children on the child protection register at any one time and around one third are placed on the register due parental mental illness.
- 5.9 Dundee's five-year rate of suicide per 100,000 people stands at 23.9 compared to an average across Scotland of 14.1.

6.0 WHAT THE DATA IS TELLING US

- 6.1 The rate of Mental Health admissions and beds has decreased across all hospital admissions and emergency admissions. However there is substantial variation by LCPP, with the most deprived localities having the highest rate of admissions and bed days across both the 18-64 and 65+ populations.
- 6.2 When benchmarked across the 8 Family Group Partnerships and compared with Scotland, Dundee has the 2nd highest rate of mental health emergency bed days for ages 18-64 and the highest rate of mental health emergency bed days for ages 65+.
- 6.3 The number of new referrals to psychological therapies has increased with most new referrals coming from Lochee. It may be of interest to note that West End has the 2nd lowest rate of emergency mental health bed days 18-64 (332 compared with 679 for Dundee) and the 2nd highest number of new referrals to Psychological Therapies.
- 6.4 The % of patients referred to psychological therapies who commenced their treatment within 18 weeks of referral (completed waits) has risen from 62% in Q1 21/22 to 72% in Q1 23/24.
- 6.5 The number of community based mental health appointments from Dundee Crisis Team has decreased, whereas the number from Dundee Community Mental Health West Team has increased. The number from Dundee Community Mental Health East Team has remained constant over the reporting time period. The number of people discharged without being seen follows the same pattern.

- 6.6 The number of community based mental health return appointments for every new patient seen is currently an average of 15. The number of new referrals to Psychiatry of Old Age dipped at Q1 22/23 and has since increased. The % of referrals accepted followed a similar pattern. At Q1 23/24, the highest number of new referrals came from The Ferry and the lowest number came from North East. The average number of return appointments for every patient seen is 11.
- 6.7 The number of new referrals to Learning Disabilities services has increased from 211 in Q1 21/22 to 336 in Q1 23/24. The highest number of new referrals was from Coldside and the lowest number was from The Ferry. The % of referrals accepted increased from 66% at Q1 21/22 to 72% at Q1 23/24. The average number of return appointments for every new patient seen at Q1 23/24 was 12, which has decreased from 18 in Q1 21/22.
- 6.8 The number of new referrals to the Social Work Mental Health Officer Team and the Community Mental Health Teams (younger and older age groups, social work) has decreased during the reporting period.
- 6.9 The number of local authority guardian applications were 52 during Q1 2023/24 and the number of Private Guardianship applications increased from 53 in Q1 21/22 to 64 in Q1 23/24.

7.0 OPERATIONAL CONTEXT / ACHIEVEMENTS / AREAS FOR FURTHER DEVELOPMENT

- 7.1 During COVID-19, there was a decision made to admit patients across Tayside into any available bed and for the entire episode of care to be delivered from that location. That is, Dundee patients may end up in Perth & Kinross or Dundee beds. Recent analysis of admissions suggested that 'out of locality' care was of similar levels for each of the localities with it possible that on any given day the number of Dundee patients in Murray Royal may be the same as the number of Perth & Kinross patients in Carseview. Whilst this has helped with immediate bed management (and minimising COVID cross-contamination risk), it has likely had the unwanted consequence of divorcing CMHTs from decision making around patient admission and timely discharge of those patients that can be best supported in the community when there is pressure on beds. Work has now started to examine re-aligning in-patient wards aligned with localities to determine whether this usefully impacts on admission rates (through the increased use of intensive home treatment) and length of stay (through greater involvement of CMHT staff during in-patient admissions and better discharge planning).
- 7.2 Within Psychological Therapies, the aggregation of data masks that a very significant number of specialities routinely exceed the RTT waiting times target. Particular issues exist within Clinical Neuropsychology, Psychology to CMHT care and Clinical Health Psychology. All three areas have experienced high vacancy levels. Arrangements are now in place with a recognised Locum Agency and remote working arrangements in place across each of these domains, albeit not to the level of existing vacancies which reflect a National shortfall in trained therapists. Increased number of Locum staff will be used where these can be secured, although there are some limits of what can be delivered remotely. The service has agreed to increase the number of training places on offer over the next training intakes to attempt to grow the workforce.

8.0 POLICY IMPLICATIONS

- 8.1 This report has been subject to the Pre-IIA Screening Tool and does not make any recommendations for change to strategy, policy, procedures, services or funding and so has not been subject to an Integrated Impact Assessment. An appropriate senior manager has reviewed and agreed with this assessment.

8.2 RISK ASSESSMENT

| | |
|--|---|
| Risk 1 Description | Poor performance could affect outcomes for individuals and their carers, spend associated with poor performance and the ability of the IJB to deliver fully commitments set out in the Strategic and Commissioning Plan. |
| Risk Category | Financial, Governance, Political |
| Inherent Risk Level | Likelihood 3 x Impact 5 = Risk Scoring 15 (which is an Extreme Risk Level) |
| Mitigating Actions (including timescales and resources) | <ul style="list-style-type: none">- Continue to develop a reporting framework which identifies performance and activity.- Continue to report data quarterly to the PAC to highlight performance and activity.- Support operational managers by providing in depth analysis regarding areas of poor performance.- Ensure that data informs operational practices and improvements and also that operational activities and priorities are used to interpret trends shown by the data. |
| Residual Risk Level | Likelihood 3 x Impact 3 = Risk Scoring 9 (which is a Moderate Level) |
| Planned Risk Level | Likelihood 2 x Impact 3 = Risk Scoring 6 (which is a Moderate Risk Level) |
| Approval recommendation | Given the moderate level of planned risk, this risk is deemed to be manageable. |

9.0 CONSULTATIONS

9.1 The Chief Officer, Heads of Service, Health and Community Care and the Clerk were consulted in the preparation of this report.

10.0 BACKGROUND PAPERS

10.1 None.

Dave Berry
Chief Finance Officer
